

Nanomagnetic Scientific Devices, which carries out its activities in accordance with the principles of the ISO 9001 Quality Management System Standard in line with its vision and mission, has created the Quality Management System by defining all business processes in detail within the framework of ensuring business continuity and continuous improvement targets.

As a company that produces measurement systems for various fields of science and technology,
Developing strategies in line with our company's vision and mission,

- to ensure sustainable and high value-added portfolio management by selecting or developing high-efficiency projects,
- to carry out studies in accordance with national and international legal regulations, standards and ethical rules in force within the scope of its field of activity,
- to carry out our management system requirements in accordance with the relevant standards and to achieve our quality targets by constantly improving our management systems,
- to provide transparency by creating an active working and participation environment for our employees to support teamwork,
- to equip all employees with the necessary knowledge and skills to develop their sectoral and personal competencies and to create on-site learning opportunities, ensuring that they assume authority and responsibility regarding their work,
- to implement social benefit projects to add value to economic and social life in our areas of activity,

we promise.
